HEALTH RISK WARNING NOTICE FOR TANNING
EACH CONSUMER MUST SIGN A CONSENT FORM ANNUALLY STATING THIS INFORMATION HAS BEEN READ AND UNDERSTOOD.

UVA vs. UVB Radiation

UVA is the dominant tanning ray, and we now know that tanning, whether outdoors or in a salon, causes cumulative damage over time. A tan results from injury to the skin's DNA; the skin darkens in an imperfect attempt to prevent further DNA damage. These imperfections, or mutations, can lead to skin cancer.

UVB, the chief cause of skin reddening and sunburn, tends to damage the skin’s more superficial epidermal layers. It plays a key role in the development of skin cancer and a contributory role in tanning and photoaging.

Potential Health Effects Related to UV Exposure

- Increased risk of skin cancer and increased risk for people with health problems who sunburn easily, have a family history of melanoma, or often get cold sores.
- UV radiation may have adverse effects on some viral conditions or medical conditions, such as lupus.
- UV radiation may cause cold sores to appear more frequently due to immune system suppression.
- Repeated exposure to ultraviolet radiation may cause premature aging and chronic skin damage characterized by wrinkling, dryness, fragility and bruising of the skin.
- Certain medications or cosmetics may increase your sensitivity to ultraviolet radiation. Check with your doctor or pharmacist. Consult a physician before using a tanning device if you are using medications, have a history of skin problems, or believe you are especially sensitive to sunlight.
- Women who are pregnant or using oral contraceptives are advised not to use tanning equipment. Tanning during pregnancy should only be done under the guidance of a physician.

If you use indoor tanning equipment, follow these steps to reduce the dangers of UV exposure.

- Be sure to wear the goggles provided, making sure they fit snugly and are not cracked. Failure to use protective eye-wear may result in severe burns and long-term injury to the eyes, including possible blindness. Closing eyes is not sufficient protection.
- Start slowly and use short exposure times to build up a tan over time.
- Don’t use the maximum exposure time the first time you tan because you could get burned, and burns are thought to be related to melanoma.
- Follow manufacturer-recommended exposure times for your skin type. Check the label for exposure times.
- Stick to your time limit. Avoid too frequent or lengthy exposure.
- After a tan is developed, tan no more than once a week. Depending on your skin type, you may even be able to maintain your tan with one exposure every 2-3 weeks.
Space tanning sessions at least 48 hours apart. Because sunburn takes 6 to 48 hours to develop, you may not realize your skin is burned until it is too late.

**The Fitzpatrick Skin-Type Chart**

You can use this skin-type chart for self-assessment, by adding up the score for each of the questions you’ve answered. At the end there is a scale providing a range for each of the six skin-type categories. Following the scale is an explanation of each of the skin types. You can quickly and easily determine which skin type you are.

Total score for Tanning Habits: _____

Add up the total scores for each of the three sections for your Skin Type Score.

Skin Type Score - Fitzpatrick Skin Type

| 0-7  | I |
| 8-16 | II |
| 17-25| III |
| 25-30| IV |
| over 30 | V - VI |

**TYPE 1:** Highly sensitive, always burns, never tans. Example: Red hair with freckles

**TYPE 2:** Very sun sensitive, burns easily, tans minimally. Example: Fair skinned, fair haired Caucasians

**TYPE 3:** Sun sensitive skin, sometimes burns, slowly tans to light brown. Example: Darker Caucasians.

**TYPE 4:** Minimally sun sensitive, burns minimally, always tans to moderate brown. Example: Mediterranean type Caucasians.

**TYPE 5:** Sun insensitive skin, rarely burns, tans well. Example: Some Hispanics, some Blacks

**TYPE 6:** Sun insensitive, never burns, deeply pigmented. Example: Darker Blacks.

**POTENTIAL PHOTOSENSITIZING AGENTS**

1. Not all individuals who use or take these agents will experience a photosensitive reaction or the same degree of photosensitive reaction. An individual who experiences a reaction on one occasion will not necessarily experience it again or every time.

2. Names of agents should be considered only as examples. They do not represent all the names under which a product may be sold.

3. If you are using an agent in any of these classes, you should reduce UV exposure even if your particular medication is not listed.
Acne treatment (Retinoic acid, Retin-A) Psoralens (5-Methoxypsoralen, 8-Methoxypsoralen, 4,5,8-trimethyl-psoralen)
Antibacterials (Deodorant bar soaps, antiseptics, cosmetics, halogenated carbanilides, halogenated phenols, halogenated salicylanilides, bithionol, chlorhexidine, hexachlorophene)
Antibiotics, anti-infectives (Tetracyclines)
Anticonvulsants (carbamazepine, trimethadione, promethazine)
Antidepressants (amitriptyline, Desipramine, Imipramine, Nortriptyline, Protriptyline), Tranquilizers, anti-emetics (Phenothiazines)
Antidiabetics (glucose-lowering agents) (sulfonylureas, oral antidiabetics, hypoglycemics)
Antihistamines (diphenhydramine, promethazine, tripolidine, chlorpheniramine)
Anti-inflammatory (piroxicam), Non-steroidal anti-inflammatory drugs (Ibuprofen, Naproxen, Piroxicam)
Antimicrobials (griseofulvin), Sulfonamides ("Sulfa drugs," antimicrobials, anti-infectives)
Atropine-like drugs (anticholinergics, antiparkinsonism drugs, antispasmodics, synthetic muscle relaxants)
Coal tar and derivatives (Denorex, Tegrin, petroleum products used for psoriasis and chronic eczema and in shampoos)
Contraceptives, oral and estrogens (birth control pills, estrogens, progesterones)
Cough medicine containing chlorpheniramine
Dyes (used in cosmetic ingredients, acridine, anthracene, cosin (lipstick), erythrosine, fluorescein, methyl violet, methylene blue, rose bengal)
Perfumes and toilet articles (musk ambrette, oil of bergamot, oil of cedar, oil of citron, oil of lavender, oil of lemon, oil of lime, oil of rosemary, oil of sandalwood)
Thiazide diuretics ("waterpills")

For more information regarding the health risks of tanning see the FDA website: http://www.fda.gov/RadiationEmittingProducts/RadiationEmittingProductsandProcedures/Tanning/default.htm or contact your local health department.
