Email Address: _____ Phone: _____

Drilling Site Address: _____ Parcel: # _____

Single Family Residence: Yes / No (describe) _____

Subdivision: _____ Lot: # _____

Well Driller Name: _____

Well Driller Phone: _____ Certification: # _____

Prior to issuance of a Well/Spring permit, a plot plan of location of well, house and septic system must be submitted for review. The permit fee includes plan review, grout inspection, and water sampling and testing. If sample results fall outside permissible limits of Weber-Morgan Health Department's quality requirements for drinking water, additional testing may be required at the owner's expense. If treatment is required for culinary water approval a Deed and Covenant Restriction must be recorded with the property detailing the treatment plan.

Weber-Morgan Health Department Non-public Well/Spring Permit Checklist

Required Documentation

- Water right with the updated name. This may require going through a name change process with the Division of water rights (801)530-7240 or www.waterrights.utah.gov
- An engineered plan, drawn to scale, showing the well head protection zone and an area adequately sized for an original and replacement septic drainfield. (This may be done part of the septic plan design)
- Engineered plans for full construction detail on spring development (required only for spring development)
- Name of the well driller
- Permit application and required fees.

A permit may be issued after review of these items.

Before final approval of the system will be issued the following will need to be completed

- Appropriate grouting of the well's annular space must be witnessed by a member of our staff
- Lab result not exceeding the EPA limits must be received by our office
- The well driller's log must be submitted
